

Hello,

GPT-6 Astra is now available in the API. Our most intelligent and aligned model ever, Astra helps you tackle the most complex multistep workflows across code, browsers, and business applications with unmatched speed, accuracy, and judgment.

Build with GPT-6 Astra

Build agents that do more

- **Efficient state-of-the-art intelligence.** Astra is state-of-the-art on computer use, professional work, software engineering, cybersecurity and more while being extremely efficient. On benchmarks such as Terminal-Bench 4.0 and Artificial Analysis Intelligence Index v4.3, OpenAI's models now occupy the majority of the cost-efficiency frontier.
- **Computer use across tools.** Navigate websites, applications, and tools through the same interfaces people use, even when no API is available, with less need for custom integrations.
- **Better writing and design.** Create documents, spreadsheets, presentations, and UIs that follow your unique style, brand guidelines, and templates.

New features in the API

- **Async tool calling**: Let Astra continue working while your application runs a tool and manages ongoing work.
- **Mid-turn steering**: Now you can send additional instructions and corrections while GPT-6 Astra is working.
- **Change reasoning mid-conversation**: Adjust reasoning effort mid-conversation while preserving the original prompt prefix for caching.

Get started

Read the [GPT-6 Astra model guide](#) or visit the [model page](#) for details and pricing.

Migrating an existing project? In Codex, use the [OpenAI Docs skill](#) with this prompt:

```
$openai-docs migrate this project to GPT-6 Astra
```

For other coding agents, follow the [migration quickstart](#).

Build with GPT-6 Astra

We're excited to see what you build.
